

WEDGE WIRE

Wedge wire provides a unique combination of two very important features, mechanical strength and aperture efficiency, and can be easily rolled, bent and welded.

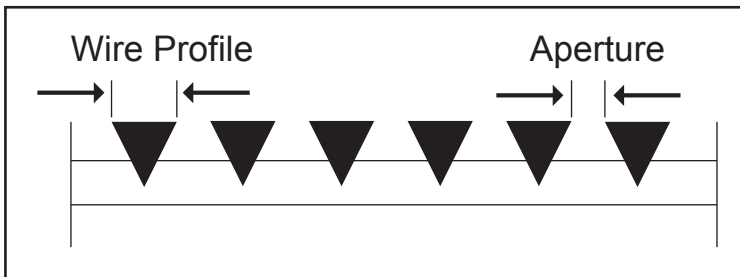

Accurate aperture can be achieved with wedge wire together with strength required to carry heavy loads.

Material Available

- SS430
- SS304
- SS316
- SS316L

Classification of Wedge Wire

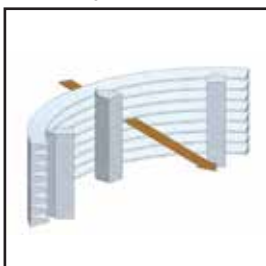

Apertures are available from 0.1mm up to 15mm and in a variety of wire profiles.

Wedge wire is available in many designs and include the following:

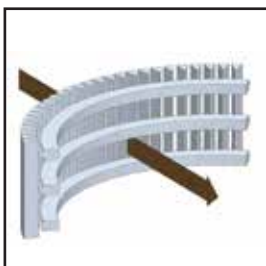

Flat sheets, sieve bends, cylinders, candle filters, water well screens, laterals, elements and baskets.

Flow types available

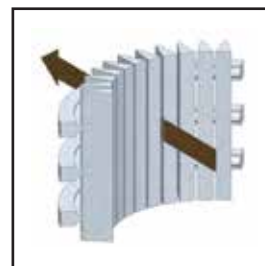

Standard Construction

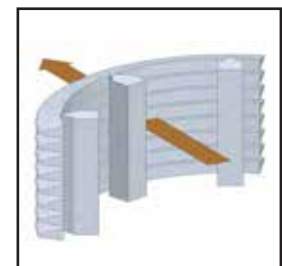

Axial Wire Construction

Internal Circumferential Wire Construction

Internal Axial Wire Construction

Inverted Wire Construction
